Financial Management; Semester VI; SECTION 6 B; B.COM HONOURS TOPIC: Sources of capital and cost of capital
Teacher: Prof. Sunita Saha (SS)

## Sources of capital and cost of capital

Read in detail the various classifications of types of finances as presented below

I. Cost of debt Capital

The capital which is procured by issuing debentures, taking loans from financial institutions or taking public deposits in terms of paying interest at a fixed rate, is called debt capital.

## Financial Management; Semester VI; SECTION 6 B; B.COM HONOURS <br> TOPIC: Sources of capital and cost of capital <br> Teacher: Prof. Sunita Saha (SS)

a. Cost of irredeemable debt: when the value of a debt capital is not redeemed in any time other than the time of liquidation of the firm, the debt capital is called irredeemable debt capital. It is also called perpetual debt capital.
Formula: $K i=I / P$ and $K d=I / P(1-t)$
Where Ki: Before tax cost of debt;
Kd= After tax cost of debt
$\mathrm{I}=$ Amount of annual interest
$\mathrm{P}=$ Net amount of realized from debt; and
$t=$ Rate of tax
Example: X CoLtd issued $10,00012 \%$ irredeemable debentures. The face value of each debentures is Rs 100. The company is in $45 \%$ tax bracket. Determine the before and after tax cost of debt if the debentures are issued at par, at a premium@ $10 \%$

Solutions:

## When the debentures are issued at par;

$\mathrm{KI}=\mathrm{I} / \mathrm{P} ; 1,20,000 / 10,00,000=12 \%$
$\mathrm{Kd}=\mathrm{I} / \mathrm{P}(1-\mathrm{t})=0.12 * 0.55=6.6 \%$
When the debentures are issued at a premium @ $10 \%$
$\mathrm{P}=10,000 * 100^{*} 110 / 100=\operatorname{Rs} 11,00,000$
By putting $\mathrm{P}=\mathrm{Rs} 11,00,000$ and $\mathrm{I}=\mathrm{Rs} 1,20,000$
$\mathrm{Ki}=1,20,000 / 11,00,00=0.1090=10.90 \%$
$\mathrm{Kd}=1,20,000 / 11,00,000 *(1-0.45)=6 \%$
Hence before tax cost of debt is $10.90 \%$ and after tax cost of debt is $6 \%$
b. Cost of redeemable debt capital: When the value of a debt capital is redeemed after a certain period of time according to the terms of issue, the debt capital is called redeemable debt capital.
In this case, the cost of such type of debt capital:-

```
Redeemable Debt Capitai. In this case, the cost of such type of Debt Capital, -
    K
where, -}\mp@subsup{K}{\textrm{i}}{}=\mathrm{ Before tax Cost of Debt Capital;
    K}\mp@subsup{\textrm{d}}{=}{=}\mathrm{ After tax Cost of Debt Capital ;
It can be noted in this context that if the before tax cost is multiplied by (1 - t), then
Ihe after tax cost is ascertained, i.e., K}\mp@subsup{K}{d}{}=\mp@subsup{K}{i}{}(1-t)\mathrm{ .
Where,
    I = Amount of annual interest;
    R = Redeemable price
    P}=\mathrm{ Net amount realised from Debt ;
    n = Time period of redemption of Debt ; and
    n}=\mathrm{ Time period of redemption of Debt ; and 
```

Financial Management; Semester VI; SECTION 6 B; B.COM HONOURS
TOPIC: Sources of capital and cost of capital
Teacher: Prof. Sunita Saha (SS)
Example:- A company issues Rs $4,00,0008 \%$ redeemable debentures at a discount of $\mathbf{1 0 \%}$ The cost of flotation amounts to Rs $\mathbf{2 0 , 0 0 0}$. The debentures are redeemable at a premium @10\% after 5 years if the tax rate is $\mathbf{4 0 \%}$ calculate the cost of debt

## Solution

| Face value of the debentures | $4,00,000$ |
| :--- | :--- |
| Less: discount on issue $\left[4,00,000^{*} 10 / 100\right]$ | 40,000 |
|  | $3,60,000$ |
| Less: Flotation costs | 20,000 |
| Net amount released from the debentures $(\mathrm{P})$ | $3,40,000$ |
| Face value of the debentures | $4,00,000$ |
| Add: Premium payable on redemption <br> $[4,00,000 * 10 / 100]$ | 40,000 |
| Redemable price $\circledR^{8}$ | $\mathbf{4 , 4 0 , 0 0 0}$ |

I = Amount of annual interest= Rs 4,00,000* $8 / 100=$ Rs 32,000
$\mathrm{t}=$ Tax rate $=40 \%$ or 0.40
$\mathrm{n}=$ time period of redemption of debt $=5$ years
$\mathbf{K i}=$ putting the values in the formula you will be getting $\mathbf{1 3 . 3 3 \%}$

## Again if Kd be the after tax cost of debt then-

$\mathbf{K d}=\mathbf{K i}(\mathbf{1}-\mathbf{t})=13.33 \%(1-0.40)=8 \%$

## c. Cost of preference share capital

Preference share are those shares which carry two preferential right such as right to receive dividend at a fixed rate before any dividend is paid on equity shares and right to return of capital at the time of liquidation of the company. The capital which is procured by issue of this type of share is called preference share capital.

1. Costs of redeemable preference share capital: Irredeemable preference shares are those preference shares which are not redeemed before the winding up of the company. This type of preference shares is also known as perpetual preference share. If Kp be the costs of such type of share capital then,
$\mathrm{Kp}=\mathrm{D} / \mathrm{P}$ [When the dividend tax is not considered]
$\mathrm{Kp}=\mathrm{D} / \mathrm{P}(1+\mathrm{Dt})$ [when dividend tax is considered]
Where;
$\mathrm{Kp}=$ Cost of preference share capital
$\mathrm{D}=$ Annual Dividend
$\mathrm{P}=$ Net sales proceeds of the shares
$\mathrm{Dt}=$ Dividend tax
The dividend tax is determined in the following way:

## Financial Management; Semester VI; SECTION 6 B; B.COM HONOURS <br> TOPIC: Sources of capital and cost of capital <br> Teacher: Prof. Sunita Saha (SS)

| Tax on dividend | $*$ |
| :--- | :--- |
| Add: Surcharge | $*$ |
| Add: Education Cess | $*$ |
| Add: Secondary and higher education cess | $*$ |
| Dividend Tax Dt | $*$ |

Example:
a) A ltd issues $12 \%$ irredamble pref shares of 4,00,000 at a discount @ 10\%. The company pays underwriting commission @ 5\%. Calculate cost of preference shares capital. Ignore dividend tax.
b) Bltd. Issues $10 \%$ perpetual share of Rs 100 each at a premium @ $20 \%$. The company issues brokerage cost @4\%. If tax on dividend is $15 \%$, Surcharge is $10 \%$, education cess is $2 \%$ and secondary and higher education cess is $1 \%$. Calculate the cost of the preference share capital.

Solutions
a) Computation of Net proceeds of the shares

| Face value of the shares | $4,00,000$ |
| :--- | :--- |
| Less: Discount | 40,000 |
| Issue Price | $3,60,000$ |
| Less: Underwriting commissions on 3,60,000 | 18,000 |
| Net Proceeds (P) | 342,000 |

Annual dividend @ $12 \%=48,000$

## $K p=D / P \quad 48,000 / 342,000=14.03 \%$

b) Computation of net sale proceeds of each share

| Face value of each share | Rs 100 |
| :---: | :---: |
| Add: premium @ 20\% | 20 |
| Issue Price | 120 |
| Less: Brokarage 120* 4\% | 4.80 |
| Net sales proceeds of each share (P) | 115.20 |
| Computation of effective rate of dividend tax |  |
|  | \% |
| Tax on dividend | 15.00 |
| Add: surcharge @ 10\% of 15 | 1.5 |
|  | 16.50 |
| Add: Education Cess@ 2\% of 16.5 | 0.330 |
| Add:Secondary and higher education cess @ $1 \%$ of 16.5 | 0.165 |
| Effective rate of dividend tax (Dt) | 16.995 |

## $\mathbf{K p}=\mathbf{D} / \mathbf{P}(\mathbf{1}+\mathbf{D} \mathbf{t})$

$=10 / 115.20 *(1+16.995 / 100)$

Financial Management; Semester VI; SECTION 6 B; B.COM HONOURS
TOPIC: Sources of capital and cost of capital
Teacher: Prof. Sunita Saha (SS)
$=10.16 \%$
2. Costs of Redeemable preference share capital : The preference shares which are redeemed after the expiry of a certain date in accordance with the terms of issue are known as redeemable preference shares

```
then -
K
K}\mp@subsup{F}{P}{}=\frac{D(1+\mp@subsup{D}{t}{})+\frac{(R-P)}{n}}{\frac{(R+P)}{2}}[\mathrm{ when dividend tax is considered ];
where, -
K
D = Annual Dividend;
P}=\mathrm{ Net Sale Proceeds of the Share ;
R = Redeemable Price;
D
n}=\mathrm{ Time period of redemption of shares.
```

Sums are given in the second part

## Weighted Average cost of capital

The weighted average cost of all the components of the capital structure is called overall cost of capital
$\mathbf{K 0}=\left(\mathbf{K e}^{*} \mathbf{W e}\right)+(\mathbf{K p} * \mathbf{W p})+(\mathbf{K r} * \mathbf{W r})+\left(\mathbf{K d}^{*} * \mathbf{W d}\right)$
Q K Ltd. Has the following capital structure:
Equity share capital (Expected dividend 15\%) 8,00,000

| $12 \%$ Preference share capital | $5,00,000$ |
| :--- | :---: |
| $10 \%$ Debentures | $4,00,000$ |
| $8 \%$ long term loan | $3,00,000$ |

You are required to calculate the WACC assuming $40 \%$ as the rate of income tax before and after tax

## Solutions:

Statement showing for computation of before tax WACC

| Items | Book value | Weight | Before tax cost $\%$ | Total cost |
| :--- | :--- | :--- | :--- | :--- |

Financial Management; Semester VI; SECTION 6 B; B.COM HONOURS
TOPIC: Sources of capital and cost of capital
Teacher: Prof. Sunita Saha (SS)

| Equity share <br> capital | $\mathbf{8 , 0 0 , 0 0 0}$ | 0.40 | 15 | 6 |
| :--- | :--- | :--- | :--- | :--- |
| Preference share <br> capital | $5,00,000$ | 0.25 | 12 | 3 |
| Debentures | $4,00,000$ | $\mathbf{0 . 2 0}$ | $\mathbf{1 0}$ | $\mathbf{2}$ |
| Long term loan | $\mathbf{3 , 0 0 , 0 0 0}$ | $\mathbf{0 . 1 5}$ | $\mathbf{8}$ | $\mathbf{1 . 2}$ |
| Before tax WACC |  | $\mathbf{1 2 . 2}$ |  |  |

| Items | Book value | Weight | Before tax cost\% | Total cost |
| :--- | :--- | :--- | :--- | :--- |
| Equity share <br> capital | $\mathbf{8 , 0 0 , 0 0 0}$ | 0.40 | $\mathbf{1 5}$ | $\mathbf{6}$ |
| Preference share <br> capital | $5,00,000$ | 0.25 | 12 | 3 |
| Debentures | $\mathbf{4 , 0 0 , 0 0 0}$ | $\mathbf{0 . 2 0}$ | 6 | $\mathbf{1 . 2}$ |
| Long term loan | $\mathbf{3 , 0 0 , 0 0 0}$ | $\mathbf{0 . 1 5}$ | 4.8 | $\mathbf{0 . 7 2}$ |
| After tax WACC |  | $\mathbf{1 0 . 9 2}$ |  |  |

After tax cost of debentures $=10 \%(1-0.40)=6 \%$
After tax cost of long term loan $=8 \%(1-0.4)=4.8 \%$
